Design Options

Integrate Answer Design Options to easily and cost-effectively address unique customer needs.

Door-front towers

Universal locker

Skins to the floor

Skins to the Floor

Achieve a built-in look while still enjoying the flexibility of a panel system. These skins to the floor can be used on Answer panels to help create a cleaner, more architectural look, particularly along aisle-ways and workstation exteriors. These skins attach in the same manner as a standard height skin and they cover the area of the panel where the base trim normally resides.

Image #09-0000410

Features:

- Available in a variety of skin types – fabric, painted steel, laminate and wood (note: not all skin types available in all sizes).
- Can be configured in both monolithic and segmented applications.
- Power and data cannot be accessed in the base area on the side of the panel that skins to the floor are applied to.

48"-High Panels

Balance privacy and collaboration in the workplace. A new panel height that is designed to be high enough to provide seated visual privacy, and low enough to still encourage and promote spontaneous communication and collaboration among co-workers.

Image #09-0000417

Features:

- 48"-high junctions are available in all standard junction types to support in-line, 90° and 120° planning.
- Available with both square and oval style junction caps.
- Corresponding skin heights (18", 30" and 42") are available to support both monolithic and segmented applications.

Special Inserts for Universal Picture Frame Bin

Explore the limitless possibilities of the Universal bin picture frame option. Standard inserts of acrylic, glass and markerboard give bins a unique look and function. The “no insert option” also allows any customer specified material to be inserted into the frame. Laminate, wood, fabric, custom glass or Fusion from Designtex® can be used to create a distinctive statement for those seeking to provide a unique environment.

Image #09-0000415

Features:

- Select a fabric or laminate insert to match panel skins or worksurfaces.
- Add the elegance of a wood insert without the weight of a complete wood door.
- Fusion materials can add richness of color and materiality while lightening the scale of an overhead bin.

Desigtex® offers a wide range of materials that can be used to find a unique solution for bin frame inserts.

Universal Door Front and Side Access Towers

Vertical storage provides high capacity in a small footprint. Towers create visual boundaries without blocking light or communication which enables collaboration. There's an abundance of storage close at hand for frequently accessed reference material, project files and work tools. Additionally, personal lockers give the user a sense of ownership.

Image #09-0000418

Image #09-0000417

Features:

- Side access towers provide ample room for binders, allowing them to be pulled at a moment's notice and room for staging files that serve as visual reminders.
- Door front towers allow for added security, keeping sensitive materials behind closed doors. At the end of the day, close the door and lock it up.
- Both the side access tower and door front tower provide the same amount of ample storage while reducing visual clutter in the office environment.
- Available with flush or proud front to align dimensionally and visually with other Universal Storage products.

Universal 1-High Lateral and Cabinet

Create an inviting space for guests with furniture that serves a dual purpose. Lateral files and open cabinets with a cushion top invite co-workers to collaborate spontaneously, or to relax and share a cup of coffee. Guests feel at home while discussing strategy without having to pull in a neighbor's chair.

Image #09-0000412

Features:

- Files can be stored away in the lateral file, front-to-back or side-to-side, letter or legal, it all fits.
- Open cabinet can be used for binders or as a cubby to tuck away a gym bag or tennis shoes.
- Lower storage allows space to open up in smaller workstations with lower panel heights.
- Available with flush or proud front to align dimensionally and visually with other Universal Storage products.

Universal Locker

Community coat storage, conveniently located with the security of a lock. Lockers can be used in the workstation or grouped together in a common area to free up space within the workspace. They provide a place to hang a coat or store large documents such as blueprint rolls.

Image #09-0000411

Features:

- Lockers can be ganged together to create a bank of storage or ganged with other cabinets like a combination cabinet to create a unique storage unit.
- 9" wide locker has a coat rod and aligns dimensionally and visually with other Universal Storage products.
- Available with flush or proud front door.

Knife-edge Worksurface

Thin is in. Knife-edge profile worksurfaces have a tapered front edge that provides the illusion of a thin, 'floating' worksurface while still providing the strength and durability of standard Universal Worksurfaces.

Image #08-0003586

Features:

- Straight, tapered, and round shapes are offered in a variety of sizes.
- Available in all Steelcase laminates, including woodgrain laminates.
- Can be applied in panel mounted or freestanding applications using many of our standard worksurface supports.
