

Introducing new Elective Elements® 6 solutions...

Slip-fit capability
for planning around
variations in architecture

Deeper upper storage
components supported at
new heights, divide space
and provide privacy

Tech zone on the
worksurface and storage
provides easy access to
power, data and worktools

Rectangular column
provides a barrier free
support and creates
visual interest

1.5-high storage
routes and distributes
power and data

Pullout shelf provides
easy access to stored
items

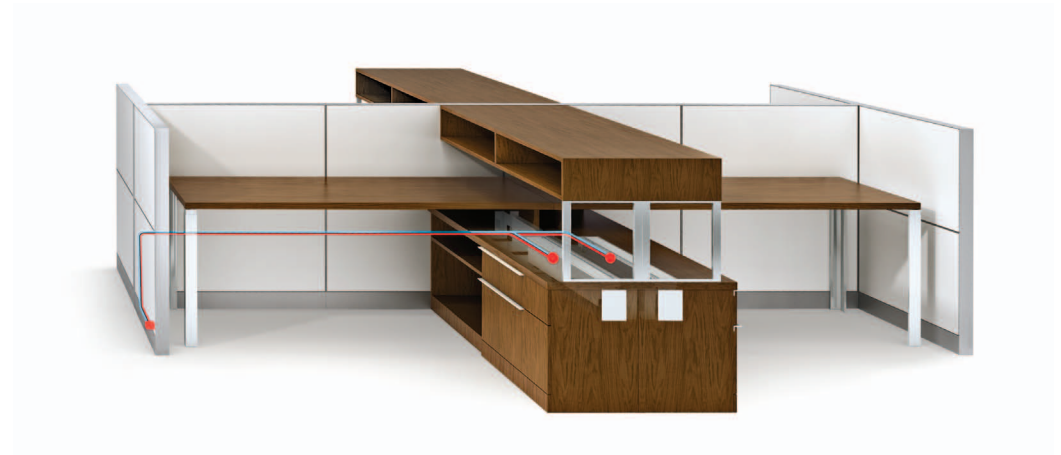

Empower storage to do more

Create a powered, **freestanding application** by configuring the storage as a component-based spine.

1.5-high storage unit features an integrated technology trough for routing power and communication directly through the storage.

Create a powered, **panel-supported application** by pairing component-based fins with a panel-based spine.

Easier access to more technology

A **tech zone** on the worksurface and storage provides convenient access to power and data with six power outlets and up to four data connections, and includes a space to hide power cords.

An **integrated rail** in the tech zone provides support for SOTO™ worktools from Details®.

Boundaries without barriers

A bench solution
without upper storage
creates a completely
open environment.

38" high solution
provides open sightlines
at seated height and
creates a convenient
standing-height
workspace.

45" high solution
provides seated privacy
and can be used as
a standing-height
transaction surface.

A closed pass-through
below the upper storage
creates a more private
workspace.

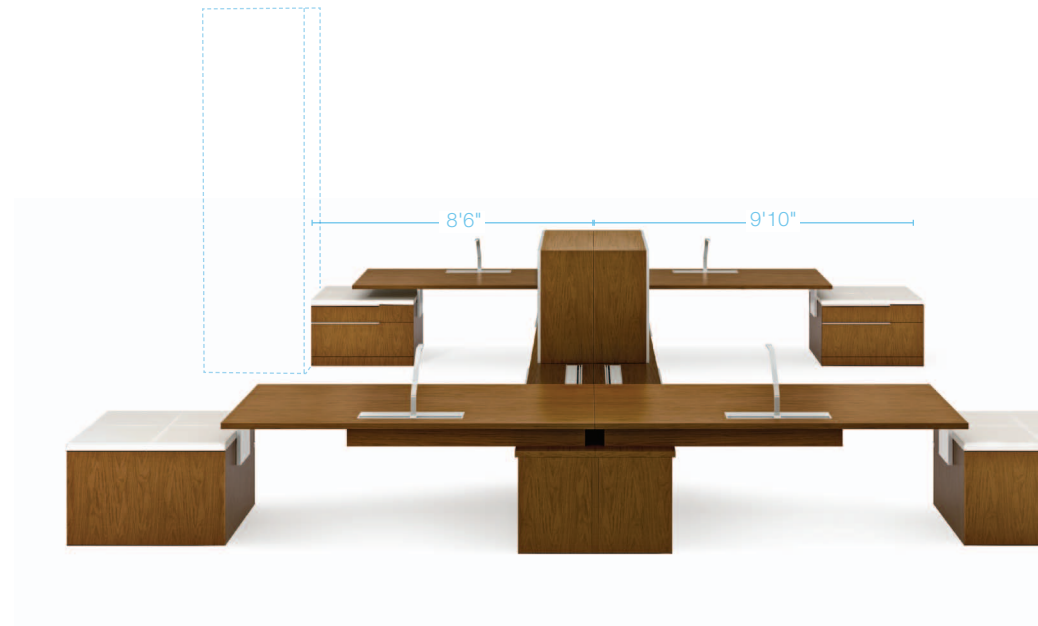

55" high solution
provides greater
seated-height privacy.

An open pass-through
below the upper storage
enables collaboration
with co-workers.

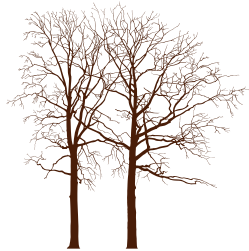

The perfect fit

In the **private office**, the slip-fit support allows the footprint of the solution to shrink or grow to create a perfect “wall-to-wall” fit.

In the **open plan**, the slip-fit support can be used to vary the overall footprint of the solution to accommodate variations in architecture, like columns.
