Unlimited possibilities.*

# MONTAGE

## DESIGN INSPIRATION

Simply put, the clinical caregiver station is the hub of patient care. So it's imperative that its layout and workspace promotes work efficiency and accuracy – today and into the future. With rapid changes in procedures, technology, and staff requirements, these work stations need to adapt quickly and easily. Montage® responds by offering modular flexibility and reconfiguration with little downtime and disruption.

Montage offers a broad statement of line ensuring that a customized work solution can be achieved through multiple frame sizes and interchangeable tiles as well as off-module panel, work surface and storage connections. With superior fit and finish, the structural integrity and robust design of Montage creates a pleasingly modern and elegant aesthetic – even in a 24/7 environment. Montage is a system solution that works as hard as the care providers that it supports.

## FEATURES AND BENEFITS

**CUSTOMIZABLE** Tailor the aesthetics to your environment by selecting from a variety of frame sizes and styles as well as a broad range of surface materials.

**ORGANIZED** Details work tools and Underline lighting support users without cluttering the work surface.

**SUSTAINABLE** MBDC Silver Cradle to Cradle<sup>CM</sup> Certified.

**FLEXIBLE** Montage can be configured and reconfigured with countless layout possibilities.

**ACCOMMODATING** A variety of panel heights balance the need for visibility and privacy and support a range of transaction tops, including those that are ADA compliant.

**ACCESS** Designed with technology in mind, power and data can be accessed all along the beltway and base. Accommodates hospital-grade receptacles and two separate electrical paths for normal and emergency power lines.

### BUMPER RAIL BRACKETS

These brackets are designed to accommodate commercial bumper rails allowing use of the same bumper on Montage as is used in the hallways or elsewhere in the facility. The rails protect panels from damage when equipment and carts collide with the work station.

#### ADA COMPLIANT TRANSACTION TOPS

Montage offers a panel height that supports a transaction top that allows easy access for wheelchair users.

#### STACKING TILES

Glass stackable tiles or frameless glass stackers create visual interest and help maintain site lines between the care provider and patient while still maintaining some privacy.

#### PASS-THROUGH CHART BOX

This chart box features a unique pass-through design that provides a place for charts to be organized and stored, while the top serves as a much needed work surface for chart documentation. As organizations transition to electronic records, the chart box can be easily removed and the panel reconfigured to meet new, emerging needs.

#### TRANSACTION MOUNTING BRACKETS

These brackets accommodate standard or custom work surfaces, allowing them to extend over panels and mount on- or off-center. Floating transaction top also provides interesting, light scale visual.

#### ROUNDED END CAPS

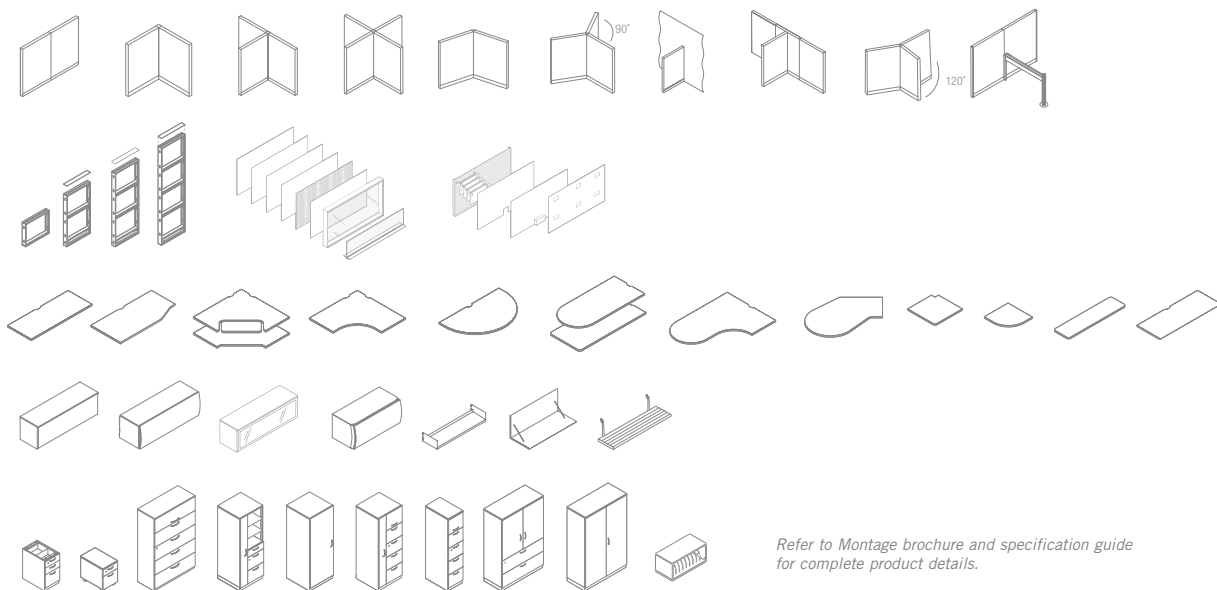

Radius design helps workers avoid or soften impact of physical contact when rushing throughout their shift.

Magnetic skin on fascia (right) makes it ideal for way-finding or branding graphics.

Custom fascia (shown at left) provides the benefits of a modular system with the look of custom millwork. Fascias are built on site to coordinate with the surrounding environment and then attached to the frame.

## STATEMENT OF LINE

Refer to Montage brochure and specification guide for complete product details.
