

Specifiers will find the Sonoma Collection is modular and aligns dimensionally to minimize the footprint and maximize the available space.

Sonoma TV cabinets take full advantage of the proprietary manufacturing technology and the integrated aluminum legs and frame that provide unparalleled structural integrity under heavy loading. Cabinets are available with and without doors, including a model with retractable pocket doors to maximize clearance and movement in smaller spaces. All models feature an upper and lower equipment shelf for DVD, VCR and cable boxes as well as three full depth drawers for additional storage.

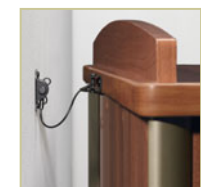

Maintenance staff will appreciate the oversized wire management grommets in the back panel that provide hassle free access for cables to connect to wall power and communication outlets. A full width opening at the rear of the TV surface and equipment shelf provides easy access for cable connections between the TV and DVD, VCR and cable boxes. Integrated openings on both side gables ensure that equipment is properly ventilated to reduce the risk of overheating.

GCLTV03 (Doors Closed)
TV Cabinets with Pocket Doors, shown in Avant Honey with Arc fascia and Arc handles.

GCLTV03 (Doors Open and Retracted)

Anti-Tip Security Kit
An Anti-Tip Security Kit is available and strongly recommended for added safety.

Commercial Hinges
Cabinet doors are mounted on commercial quality hinges that provide a full 170 degree opening for unobstructed access.

Wire Management
TV, DVD, and VCR cables & wires are easily managed through oversized wire grommets

TV Cabinets with Hinged Doors, shown in Shaker Cherry with Linear fascia & Arc handles.

GCLTV02 (Doors Open)

GCLTV01 (No Doors)
TV Cabinet, shown in Shaker Cherry with Linear fascia and Arc handles.

Features and Benefits

Top Fascia

The top fascia is available in four attractive transitional styles and acts as a guard to prevent small objects from rolling off the back of the wardrobe and out of reach. A fascia at the bottom of the wardrobe is provided in a matching profile.

TV, DVD, VCR and Cable Boxes

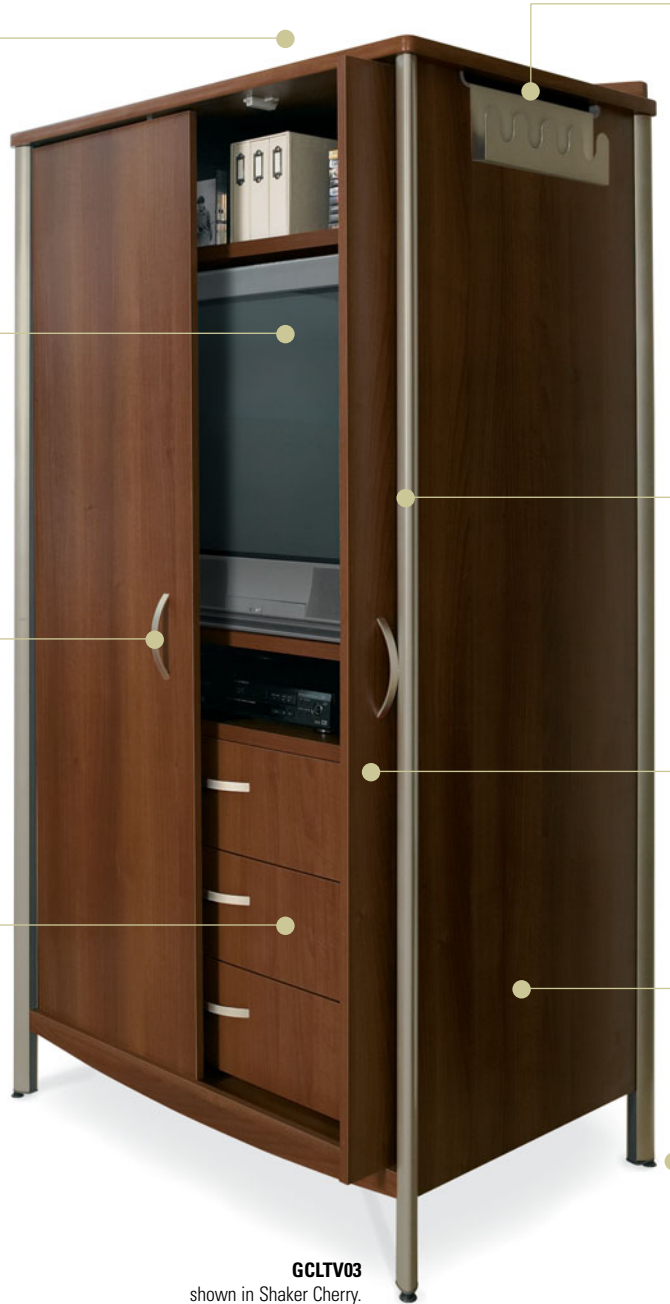

TV Cabinets have been designed to structurally support and accommodate CRT type TVs as large as 32 inches. Generous wire management grommets in the back panel provide easy access for cables to connect to wall power and communication outlets as well as between the TV and DVD, VCR and cables boxes.

Handles

Five handle options are available in coordinating finishes. All handles deliver minimal interference, gentle contours and generous hand clearance to accommodate people with reduced vision or limited motility. Custom handle options are also available on a project basis, consult your GlobalCare Representative for more information.

Drawers

Cabinet drawer interiors are polymer wrapped for stain and moisture resistance. Drawer suspensions offer an 80 percent extension and allow for the drawers to be removed for cleaning or transfer by housekeeping staff.

shown in Shaker Cherry.

Ventilation

Ventilation openings are provided at the top of both side gables to promote airflow. All of the ventilation openings are fitted with a polymer liner for durability and cleaning. The ventilation openings also provide the attachment for the hanging accessories.

Hanging Accessories (Optional)

The Hanging Accessories can be located on either side of the dresser and provide additional storage and quick access to magazines, facial tissue, hanging bags and other personal items. The Hanging Accessories are finished in a durable, powder coated epoxy finish that matches the legs and can be easily removed for cleaning.

Legs and Frame

The legs are constructed of heavy duty aluminum extrusions and provide superior structural integrity due to the continuous attachment along the full length of the cabinet's frame. The legs are finished in color coordinated and environmentally friendly powder coated epoxy. Custom colors are available on a project basis, consult your GlobalCare Representative for more information.

Doors

Full height cabinet doors are fitted with three commercial quality hinges that are fully adjustable and provide 170 degrees of opening. Pocket door models retract and stop short of the handles to avoid catching hands.

Chassis

The chassis panels are fully captured along the entire length of the aluminum leg framework providing superior strength and structural integrity.

Glides

Glides on all four legs are height adjustable to ensure that the top surface can be levelled or slightly angled back towards the rear fascia to reduce the potential of small objects rolling off the top and out of reach.
